Boasting is seldom found in the lexicon of the metals trade. Action often is. Our long list of customers the world over, among them the most famous names in industry, confidently turn to us time and again for tube and pipe applications in central power stations. Such repetitive business is praise enough that we are meeting exacting standards; that our qualitative goals set four decades ago have never diminished under continuously advancing technology. Exhaustive research and strict quality assurance help the 400-year old Japanese family name of Sumitomo retain its distinction for excellence. Call, or write us:
